Project Proposal

The option that I am choosing for my final project is Option 1: Monte Carlo Simulation study. I am unsure what exactly the simulation that I need to run will look like but I want to gain experience in running simulations so that I can improve my career choices. I want to enter into ed-tech and running simulations of randomized data seems a desired skill in that context. This paired with machine learning may be the best combination of tools at my disposal and I would like to gain practice for it. The details of the project will come soon (as per our conversation the other day) but for now, my choice will be Option 1.
